

Orco Padding Gum P™

Orco Padding Gum P™ is a high-viscosity modified natural gum typically used in conjunction with **Orco's** high and low-temperature cure padding resins such as **Orco Pad Binder HLF-P™** and **Orco Pad Resin FGT™**. This system is extensively used in narrow fabric, nonwovens, and various pad-steam applications.

Applications

- Yields excellent color value, brightness and levelness of shade when used with **OrcoBrite™ Padding Pigments**.
- Well suited for use in white discharge padding formulations.
- Useful in printing formulations and is compatible with the range of chemicals normally encountered in printing formulations.

Procedures

Starting recommendation is 2.0-4.0 oz/gal **Orco Padding Gum P™**

For pigment padding of wide goods, the amount will vary depending on type of fiber, construction of goods, and heat conditions during drying and curing.
