

## Orco Padding Resin FGT™

**Orco Padding Resin FGT™** is a versatile, thermosetting cross-linking melamine formaldehyde additive for special applications requiring dimensional stability. **Orco Padding Resin FGT™** can also be used in combination with acrylic resins for added stability.

### Physical Properties

<b>Physical form</b>	Clear viscous syrup
<b>Solubility</b>	Soluble in water in all proportions
<b>Compatibility</b>	Compatible with most textile finishing agents
<b>Pad Bath Stability</b>	8 hours +
<b>pH</b>	8.5 - 9.0

### Applications

- Additive to improve washfastness of pigment print and pad operations
- Resin finishing of cotton, rayon, and poly/cotton blends
- Shrinkage control on cellulose and cellulose synthetic blends
- Hand building additive for all fibers
- Dry cleaning fastness may also be improved on many pigment applications by the use of 0.25 to 2.0 oz/gal of **Orco Padding Resin FGT™**
