

## ORCO Auxiliary OLG/LB™

**ORCO Auxiliary OLG/LB™** is an in-bath additive for high-temperature dyeing of polyester and blends with cotton and/or wool. This product is suitable for yarn and wide goods processing as well as functioning as a dye bath lubricant.

### Physical Properties

<b>Chemical Type</b>	Emulsified petroleum based fluid
<b>Appearance</b>	Clear yellow fluid
<b>Solubility</b>	Disperses in warm water readily
<b>Ionic Charge</b>	Nonionic
<b>Storage</b>	Protect from freezing temperatures or storage in areas of extreme heat.

### Applications

- Pre-disperse (3:1) in warm water before pumping or adding to dye equipment.
- Use at the rate of 2.5-3.5% on weight of goods and allow to circulate for 10 minutes prior to the addition of other auxiliaries and dyes.
- Commence operation as usual.
- It is always recommended that upon completion of the dye cycle, the bath should be dropped as hot as possible to help prevent oligomer deposition on fabric and or metal surfaces.
